

Name: Hoy Wu Process Overview

The project began with me generating assets that mimic the artstyle of a game called “Don’t Starve Together” using nano banana from gemini. Then I prompt engineered a game creation prompt to create a start to this project. There were a lot of problems especially with my prompt engineering that led to many problems. For example, the background image wasn’t viewed as a background that would change as the player moved around the world. The assets put into the game were fixed and not random. When I made it random there were too many and they were too big. So with all the different tweaks and changed, this project was created.

Process Evidence

GenAI Documentation

Date Used: February 23, 2026, 2026

Tool Disclosure: Gemini 3

Purpose of Use: I thought AI could do a better job and be more time efficient in coding my vision.

Summary of Interaction: The tool contributed in writing the code for the project.

Human Decision Point(s): I had a vision for the game and made lots of tweaks to the AI's starting code using AI.

Integrity & Verification Note: Re-reading the assignment instructions, the work seemed fitting of the instructions. In fact, the only flaw would be that I went way beyond the scope of the assignment and added too much to the project.

Scope of GenAI Use: I used AI to generate all the changes to my code.

Limitations or Misfires: It did perfectly fine.
